PROFILE

Full-stack developer with a strong foundation in front-end and back-end engineering, passionate about building scalable SaaS platforms and impactful data-driven products. Experienced in designing clean, performant interfaces and robust backend systems using modern frameworks and cloud-native tools. Motivated by curiosity, continuous learning, and delivering real business value through engineering.

EDUCATION

University of Prishtina "Hasan Prishtina"
Master in Computer and Software Engineering
2025 – Present
University of Prishtina "Hasan Prishtina"
Bachelor in Computer and Software Engineering
2021 – 2024

LANGUAGES

Albanian – Native
English – C1

WORK EXPERIENCE

Software Developer – Trendly
November 2025 – Present

- Built and maintained automation workflows for short-form video operations (ingestion, validation, scheduling, publishing), reducing manual handling and improving consistency.
- Developed cloud-based services (e.g., HTTP/GCS-triggered functions) to process media and metadata; implemented retries with backoff and structured logging for reliability.
- Designed data pipelines and analytics tables (e.g., BigQuery) to track content lifecycle, deduplication, and operational KPIs; enabled quick debugging and auditability.
- Implemented internal tools/dashboards (e.g., Retool) with server-side pagination, dynamic filters, and guardrails to prevent invalid submissions.
- Integrated third-party APIs (social platforms) with robust error handling and parameter validation (e.g., enforcing platform field limits) to reduce failed publish attempts.
- Collaborated with stakeholders to translate workflow needs into features; documented processes and ensured maintainable code.

Software Developer – IT and Data Department at Raiffeisen Bank Kosova
January 2024 – October 2025

- Developed and maintained secure RESTful APIs and integration services using ASP.NET Core and Entity Framework, enabling communication between internal systems and external services.
- Worked with Appian (low-code) to support process automation and integration layers for business workflows and case management.
- Integrated services with core banking system (T24) via APIs/middleware patterns to support banking operations and data exchange.
- Implemented security and compliance controls (RBAC, input validation, encryption, audit logs) aligned with regulated environment requirements.
- Improved reliability through monitoring, structured logging, and clear technical documentation; collaborated closely with Product Owners and QA.

PROJECTS

NFT Tokenization Web Application – Built a full-stack dApp for digital asset tokenization, enabling users to generate, describe, and mint NFTs with AI integration and IPFS-backed metadata. Integrated with Web3.js and smart contracts to deliver secure, transparent ownership — mimicking end-to-end product delivery in SaaS environments. Designed and deployed a Solidity smart contract in Remix to enable NFT minting and metadata management. Utilized IPFS for decentralized storage, ensuring that NFT metadata and images are securely hashed and stored.

Job Scheduling Website using Greedy Algorithm – Created a real-time scheduling simulator using greedy algorithms. Visualized how task weight, duration, and deadlines affected queue prioritization.

Impact: Replicated logic behind automated workload tools and job dispatch systems.

Social Media Web Application – Developed a scalable mini-social media platform with authentication and image uploads. Used React frontend with Flask backend and PostgreSQL database. Emphasized responsive UI/UX and clean REST API separation.

TECHNICAL SKILLS

Front-End: HTML5, CSS3, JavaScript, React
Back-End: .NET, Python (Django, Flask)
Databases: PostgreSQL, MongoDB, MySQL
DevOps & Tools: GCP, Docker, Git, GitHub
Low-Code Platforms: Appian, Retool
Design: Figma, Responsive UI, SCSS
Other: RESTful APIs, Agile/Scrum methodologies

SOFT SKILLS

Problem-Solving and Critical Thinking
Effective Communication and Team Collaboration
Adaptability and Continuous Learning
Time Management and Project Planning

CERTIFICATIONS

Blockchain Training – BlockJump Kosovo
October 2024 – January 2025
Python Development – Beetroot Academy
Python, Flask, Django
October 2023 – January 2024
ReactJS – BIT Academy
July 2023 – November 2023
